PROFESSIONAL SUMMARY

Frontend Developer with over 1.5 years of experience building web applications using React.js, TypeScript, and Tailwind CSS. Skilled in component architecture and SPA development. Prior experience in automotive cybersecurity (CAN-Bus intrusion detection) at KPIT Technologies brings a strong foundation in systems thinking and analytical problem-solving.

TECHNICAL SKILLS

Frontend: React.js, React Router v6, React Hooks (useState, useEffect, useContext), Context API, Redux, Redux toolkit, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Backend: Node.js (Basics), Express.js (Basics)

Tools & Platforms: Git, GitHub, NPM, Vite, VS Code

WORK EXPERIENCE

Frontend Developer | Freelance *Aug 2025 – Present*

- Designed and developed customer-facing web applications using React.js in collaboration with a web team, delivering responsive and scalable UI solutions.
- Built a Single Page Application (SPA) using React Router v6 with nested routes, protected authentication routes, and dynamic URL parameters - reducing page load time by 65% compared to a traditional server-rendered approach.
- Developed fully responsive web interfaces using reusable React components and Tailwind CSS, ensuring consistent UI across mobile, tablet, and desktop breakpoints.

Software Developer | KPIT Technologies Limited *May 2019 – Dec 2020*

- Designed and developed an Intrusion Detection and Prevention System (IDPS) for automotive CAN-Bus protocol, achieving an 80–85% anomaly detection rate in simulation.
- Conducted protocol simulations using CANoe tool to validate detection algorithms under real-world CAN traffic conditions.
- Analyzed and extracted packet data during CAN-Bus transmission to identify and flag communication anomalies in connected vehicles.
- Integrated security measures and developed prototypes to detect early-stage anomalies, strengthening the vehicle network's resilience against cyber threats.

Software Developer Intern | KPIT Technologies Limited *May 2018 – May 2019*

- Researched advanced prevention techniques to protect CAN-Bus networks from injection, replay, and fuzzing attacks.
- Performed data analysis on connected vehicle communication protocols and identified key areas for prototype implementation.
- Assisted in designing and improving firewall strategies for connected vehicle communication protocols.

PROJECTS

Freelance Project | Tech Stack: Reactjs, Tailwind CSS

- Developed a modern, responsive website for a digital solution agency to showcase their work and projects.
- Followed a professional design aesthetics aligned with the agency branding .
- Ensured cross-device compatibility and performance optimization.

Rentify - Van Rental Application| Tech Stack: Reactjs, React Router Rentify-App

- Built a responsive van rental web app using React 18, React Router v6, and Vite.
- Implemented client-side routing with nested routes, dynamic segments, and protected routes for host dashboard.
- Built reusable components (VanCard, FilterBar, NavBar) following DRY principles .
- Maintained clean project structure with separation of concerns across pages, components, and utilities.

EDUCATION

M.Tech — Computer Science and Information Security *Aug 2017 – May 2019*

Manipal Institute of Technology, MAHE University — Manipal, Karnataka
